

Take the +ve grip

CurogripTM

Teicoplanin 400mg Injection I.P.

Take the +ve grip

Curogrip™

Teicoplanin 400mg Injection I.P.

Mechanism of Action:

It has bactericidal activity, Binds to the terminal D-Ala-D-Ala sequence of peptides forming the bacterial cell wall and by sterically hindering the transglycosylation reaction, inhibits the formation of peptidoglycan.

Indication

Treatment of the osteomyelitis

Septic arthritis

Non cardiac bacteremia, septicemia Caused due to staphylococci

Spectrum of activity:

It is active against both aerobic and anaerobic gram-positive bacteria
Species usually sensitive (MIC less than or equal to 16mg/l);
Staphylococcus aureus and coagulase negative staphylococci (sensitive or resistant to methicillin), Eikenella corrodens,
group JK corynebacteria and gram-positive anaerobes including Clostridium difficile and peptococci.

Doses-

Prophylaxis 400mg iv as single dose

Loading 400 mg iv on first day followed by 200mg as maintenance
